HEMOSTAT DRESSING/INTRANASAL SPLINT

- Biocompatible—made of all natural Chitosan-based polymers
- Minimizes bleeding and edema after surgery
- Easily conforms to nasal anatomy
- Offers easier placement with a superior field of view
- No special storage conditions required

PRODUCT DESCRIPTION:

PosiSep® is a unique carboxymethylated chitosan-based hemostatic intranasal splint that has been custom formulated for OR and Office Based FESS procedures with minimal bleeding and where rapid clearance of the product is desirable. After hydration, PosiSep® will immediately expand, turn into a gel, then begin clearing the sinus cavity. Subsequent irrigation will cause the product to dissolve, thus optimizing patient tolerance and comfort.

- Dissolves naturally by way of gentle irrigation and aspiration
- Easy to apply—no mixing or additional prep time necessary

PosiSep® Hemostat Dressing/Intranasal Splint is indicated for use in patients undergoing nasal/sinus surgery as a space occupying splint and hemostat to:

- Separate tissue or structures compromised by surgical trauma;
- Separate and prevent adhesions between mucosal surfaces during mesothelial cell regeneration in the nasal cavity;
- Help control minimal bleeding following surgery or trauma;
- Help control minimal bleeding following surgery or nasal trauma by tamponade effect, blood absorption and platelet aggregation; and
- Act as an adjunct to aid in the natural healing process.

PosiSep is indicated for use as a nasal hemostat to treat epistaxis. PosiSep is intended for use under the direction of a licensed healthcare provider.

What is Chitosan?

Chitosan (ky-toe-san) comes from a substance known as chitin, an amino-polysaccharide removed from the powdered shells of crustaceans.
