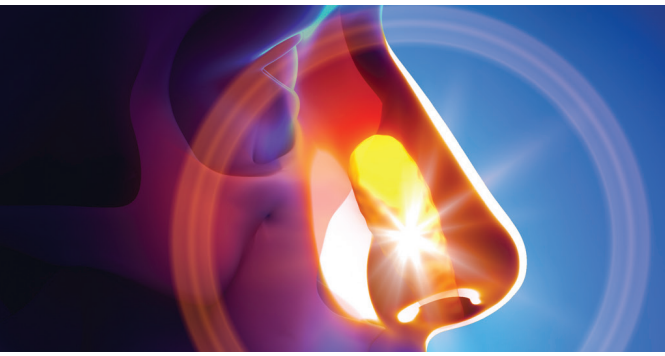
PosiSep®

HEMOSTAT DRESSING/INTRANASAL SPLINT



- **Biocompatible-made of all natural Chitosan-based polymers**
- **Minimizes bleeding and edema after surgery**
- **Easily conforms to nasal anatomy**
- **Offers easier placement with a superior field of view**
- **No special storage conditions required**

PRODUCT DESCRIPTION:

PosiSep® is a unique carboxymethylated chitosan-based hemostatic intranasal splint that has been custom formulated for OR and Office Based FESS procedures with minimal bleeding and where rapid clearance of the product is desirable. After hydration, **PosiSep®** will immediately expand, turn into a gel, then begin clearing the sinus cavity. Subsequent irrigation will cause the product to dissolve, thus optimizing patient tolerance and comfort.

- **Dissolves naturally by way of gentle irrigation and aspiration**
- **Easy to apply-no mixing or additional prep time necessary**

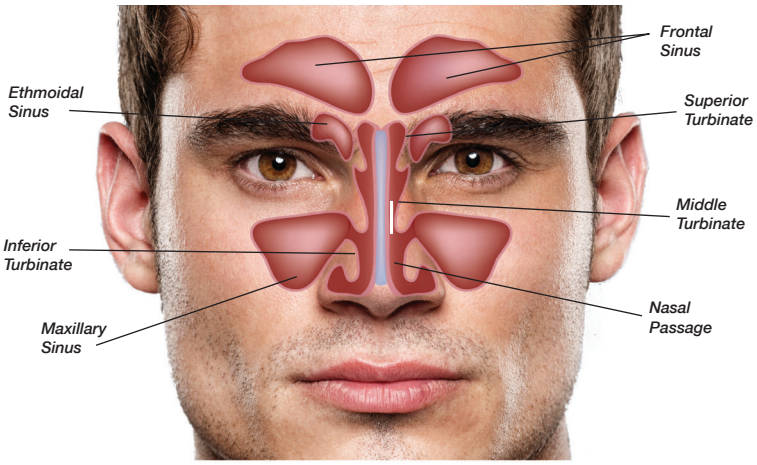


diagram not to scale

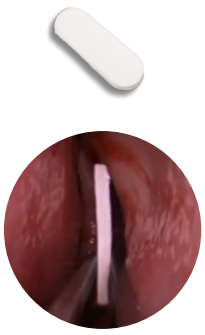
PosiSep® Hemostat Dressing/Intranasal Splint is indicated for use in patients undergoing nasal/sinus surgery as a space occupying splint and hemostat to:

- Separate tissue or structures compromised by surgical trauma;
- Separate and prevent adhesions between mucosal surfaces during mesothelial cell regeneration in the nasal cavity;
- Help control minimal bleeding following surgery or trauma;
- Help control minimal bleeding following surgery or nasal trauma by tamponade effect, blood absorption and platelet aggregation; and
- Act as an adjunct to aid in the natural healing process.

PosiSep is indicated for use as a nasal hemostat to treat epistaxis.
PosiSep is intended for use under the direction of a licensed healthcare provider.

CE 0050

Before Hydration	After Hydration
	



When PosiSep® is hydrated, its smooth gel action separates sinus mucosal tissue.

What is Chitosan?

Chitosan (ky-toe-san) comes from a substance known as chitin, an amino-polysaccharide removed from the powdered shells of crustaceans.

CHITOSAN TECHNOLOGY
